

## **Bulbophyllums**

Learn about this amazing group of species and hybrids. You may be aware of Bulbophyllums but have you grown them? They make excellent companion plants with Phalaenopsis and Paphiopedilums. Little hybridization has been done but the results have been fantastic. A PowerPoint presentation.

### *Bio for above talk*

What an amazing group of orchids. Although not widely popular this group deserves some notice. They make good companion plants with Phalaenopsis and Paphiopedilums. They grow fast and the hybrids are outstanding. Want to try something different? Here they are.

Fred Clarke has been growing orchids for 30 years and has been hybridizing for 22 of those years. With over 24 years as a professional grower and manager in the horticultural industry, Fred applies these skills at his orchid nursery; Sunset Valley Orchids, located in San Diego, California.

He is a passionate orchid grower whose curiosity in orchids is broad and varied. Although developing Cattleya hybrids has been his sustaining interest, he is also actively creating new Bulbophyllum and Paphiopedilum hybrids plus some others to be named if they work out!

His pioneering work in *Catasetum* intergeneric hybrids led to the development of several notable hybrids, most recently the grex, Fredclarkeara After Dark, which produced "*the closest flower color to black ever witnessed*". This grex received seven FCC's and three AM's on the first flowers shown for judging.

Fred is an Accredited Judge in the Pacific South Region. His plants have received hundreds of quality awards from the American Orchid Society.
